

PROFESSIONAL SUMMARY

Computer Science Engineering (Data Science) student and AI Research Intern with hands-on experience in data analysis, machine learning, NLP, predictive modeling, and end-to-end data-driven solutions. Proficient in Python, SQL, Pandas, NumPy, and Scikit-learn, with experience working on real-world datasets, model development, experimentation, and cloud deployment. Published AI researcher with strong problem-solving, analytical, and leadership skills.

TECHNICAL SKILLS

Programming: Java, Python, SQL, C

Data Science & Analytics: Pandas, NumPy, Matplotlib, Exploratory Data Analysis, Data Preprocessing, Feature Engineering

Machine Learning: Scikit-learn, Regression, Classification, Clustering, Predictive Modeling

Deep Learning & AI: TensorFlow, Keras, CNN, NLP, LLMs, Small Language Models

Databases: MySQL, MongoDB

Cloud & Tools: AWS, Git, GitHub, Linux, Google Colab, VS Code, Databricks

Frameworks: Flask, Streamlit

EXPERIENCE

AI Research Intern – Oscowl AI

Mar 2026 – Aug 2026

- Researched efficient Small Language Model (SLM) architectures, contributing to the Viola13M project focused on model optimization and fine-tuning.
- Applied Python and deep learning techniques to evaluate and improve model efficiency, collaborating with the research team on experimentation.
- Co-authored the research publication “The Viola Architecture for Efficient Small Language Models,” documenting project findings.

PROJECTS

Real-Time Crop Disease Detection & Weather-Based Farm Scheduling

[GitHub Repo](#)

– Python, TensorFlow, MobileNetV2, Flask, NLP, Weather API, Voice Assistant

- Designed a MobileNetV2-based model to detect crop diseases from leaf images, integrated a weather API for farm scheduling, and built a multilingual voice assistant for accessibility.
- Secured 3rd Place at the SRDC Research Competition, JAIN (Deemed-to-be) University.

Smart Queue Management System

[GitHub Repo](#)

– Flask, MongoDB, AWS

- Built a cloud-deployed queue tracking system using Flask and MongoDB to manage real-time queue status, deployed on AWS for scalable access.

Livestock Growth Prediction

[GitHub Repo](#)

– Python, Scikit-learn, TensorFlow, Machine Learning, Data Analysis

- Built a Scikit-learn regression model to predict livestock growth patterns from historical data, including data preprocessing and analysis.
- Developed an NLP-based sentiment analysis model to classify text sentiment using TensorFlow and Scikit-learn.

PUBLICATIONS

- “The Viola Architecture for Efficient Small Language Models,” Oscowl AI Research.
- “Real-Time Crop Disease Avoidance and Weather-Constrained Farm Scheduling Using MobileNetV2-Based Vision and Multilingual Voice Advisory,” SRDC Research Competition, JAIN (Deemed-to-be) University.

ACHIEVEMENTS

- 3rd Place, SRDC Research Competition, JAIN (Deemed-to-be) University.
- All India Rank 7915, AINCAT 2026, All India Rank 4043, AINCAT 2025 (Naukri Campus).

LEADERSHIP & CERTIFICATIONS

Leadership: IEEE IT Society – Chair

Certifications: AWS Academy Cloud Foundations, Azure AI Fundamentals, AWS Certified Cloud Practitioner

EDUCATION

Rajeev Gandhi Memorial College of Engineering and Technology (RGM CET)

B.Tech, Computer Science Engineering (Data Science)

2023 – 2027

CGPA: 8.24
